

Time to raise the bar.

AI can build a deck in an afternoon now — so can every other vendor's tool. That was never the hard part. The hard part is whether a petroleum engineer checked the numbers and a compliance review cleared the language before an investor saw it. That is the layer we add.

WHAT WE BUILD

Land & technical visualization	Plan-view lease exhibits, unit detail, structural cross-sections, photorealistic 3D terrain renderings.
Presentation systems	Decks, one-page offering statements, gated portals, and the source-of-record database that keeps every version in sync.
Brand, web & documents	Identity systems, websites, and production support for PPM assembly and offering-document workflows.

SEND ONE DRAWING AND WE REDRAW IT, FREE — THIS IS WHAT CHANGES

BEFORE — AS IT ARRIVES	AFTER — SAME SHEET, MADE LEGIBLE
	

Both sheets are illustrative — a fictional program, drawn by Casing Point. Same scale, same origin, same seven runs; nothing added, removed or re-measured. Bracken Ridge Operating, Kettle Flats, Harlow County and every name, figure and route on the pair are invented to demonstrate document production — no real drawing, field, route or operator was redacted or copied to produce them. Not a real property, operator, survey, pipeline or offering, and not an offer to sell or a solicitation of an offer to buy any security. Both sheets at full size, plus three lease exhibits, are at eddiesajjad.com/casingpoint.

HOW EVERY ARTIFACT SHIPS

01 · Produced Built fast from your own land, well and financial data, with AI-assisted tooling under human review.	02 · Engineer-verified Technical claims reviewed by a qualified petroleum engineer before anyone calls them facts.	03 · Compliance-checked A standing Reg D 506(c) and anti-fraud pass on every investor-facing artifact before release.
--	--	---

WHAT CASING POINT HAS BUILT

15	Offering pages rendering live from one database — one client's portfolio	15	16:9 investor decks with export — same client portfolio	15	Printable one-pagers with a text fitter — same client portfolio
137	Source images in a before / after rendering library	5x17	Design systems × offerings in the cover generator	6	Brand identity systems, end to end — six separate brands, not one portfolio

What these numbers are, and are not. These are Casing Point's own production counts — artifacts Casing Point built. The three counts of fifteen describe depth on one client relationship, not breadth across many clients; the six brand identity systems are separate engagements for different brands. They are not any client's raise size, offering terms, well count, reserve figure or return, and no figure in this document describes the performance of any investment.

THE TECHNICAL BENCH — PEC GROUP, OUR PARTNER FIRM

Founded Houston 1972 · 840+ petroleum engineers · 7,000+ combined years · 15+ countries · 19 disciplines

Figures as published by PEC Group on pecgr.com, read 21 August 2026. PEC Group is an independent partner firm engaged on a project basis; these figures describe PEC, not Casing Point.

WHO YOU DEAL WITH

Eddie Sajjad leads every engagement personally — he reviews the work, not just the proposal, and he is the person on the intro call. He is an active oil & gas investor who has written the checks himself. His father, Asghar Sajjad, founded PEC Group in 1972, which is why PEC's bench is available to Casing Point clients at all. Production runs through a standing offshore team under his direct review.

Casing Point is not a broker-dealer, is not registered with the SEC or FINRA, and does not solicit, recommend or effect transactions in any security. Casing Point is compensated on a flat-fee, project basis for production and design services — never as a percentage of capital raised, a per-investor fee, or any other transaction-based compensation. All investor communications, solicitation and fundraising activity remain the sole responsibility of the issuer and its registered broker-dealer, if any. Casing Point does not provide legal advice, does not draft or approve offering documents as legal work product, and is not a law firm; all offering documents, exemption analysis and fund structuring must be prepared, reviewed and approved by the issuer's own securities counsel before use. Our internal review process is a quality-control and issue-spotting

practice, not a legal compliance opinion. Casing Point uses AI-assisted tools in production; AI tools do not replace engineering judgment, legal advice, or the issuer's own securities counsel. Nothing in this document is an offer to sell or a solicitation of an offer to buy any security. Past client work does not guarantee similar results for any future engagement. The complimentary redraw is a production and design demonstration: it is not engineer-verified, has not been through our compliance review process, and is not investor-facing material. Material you send is used only to produce your sample and is not published, reused or disclosed without your written permission. © 2026 Casing Point.
